## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 30-37 are rejected under 35 U.S.C. 102(b) as being anticipated by Studtmann (4,511,835).

Studtmann discloses a system for converting AC power and DC power comprising: a rectifier (51) configured to receive AC power at an input and having at least one switch (52-57) controllable to convert the AC power to DC power provided to an output of the rectifier; and a controller (58) configured to monitor at least one of the input and the output (66, 67) of the rectifier to identify a reduction in the AC power and control the at least one switch to control an amount of inrush current permitted upon a recovery of the AC power following the reduction. The controller is configured “to produce properly timed gating pulses for application to the gates of SCR’s 52-57 to control the firing angles of the SCR’s as required to establish the d-c bus voltage across lines 66 and 67 at the average magnitude necessary to establish and to maintain the inverter output voltage at the desired steady amplitude level.” The claim limitations “to advance a switching-on time” and “to return the switching-on time” read on the increasing and the decreasing of the firing angles of SCR’s 52-57 to bring the bus voltage back up to the required steady state level. Further, the voltage recovery of at least three-quarters of the desired steady state level and the incremental move of the switching-on time of the switch is met by the

automatic correction performed by the controller 58. With respect to claim 37, Studtmann' controller clearly move the switching-on time in at least one of linear and a non-linear progression. Hence, claims 30-37 fail to set forth any patentable feature distinguishable from Studtmann.

***Response to Arguments***

3. Applicant's arguments with respect to claims 30-37 have been considered but are moot in view of the new ground(s) of rejection.

***Allowable Subject Matter***

4. Claims 1, 3-16, and 18-25 are allowed.

***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
